

Quick Start Guide:

Connecting a Mesh Satellite

Before starting your Mesh Satellite installation, review the Placement Guide within the CommandIQ app.

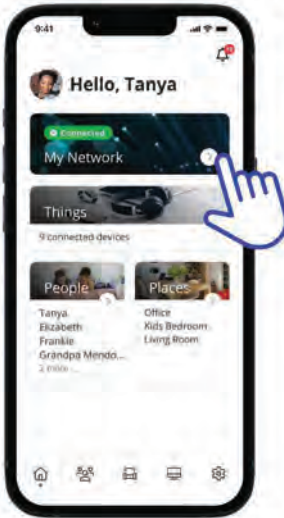

1

Plug your mesh satellite into a power

2

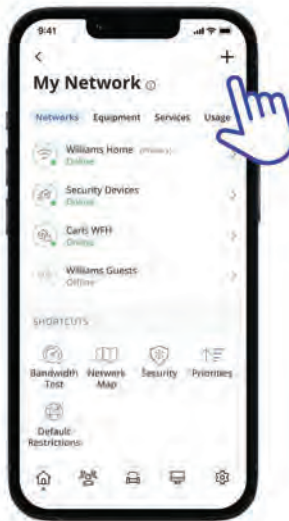

Open the CommandIQ Wi-Fi App.

Tap the + button

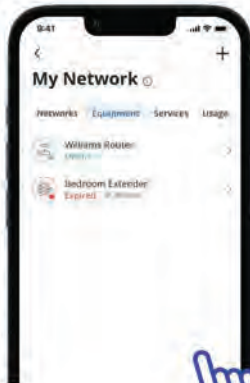

3

Next, tap Add Equipment to add a satellite.

4

Scan the QR code on the bottom of the mesh unit.

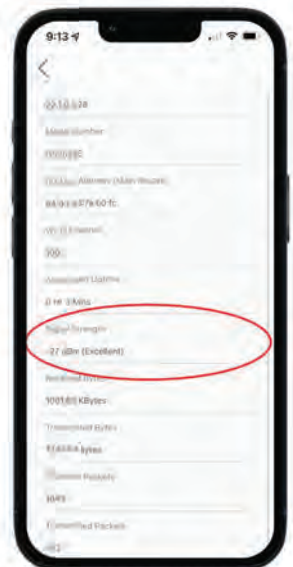

5

Once complete, you will see your newly added mesh satellite in the Equipment section within My Network.

Tap into the mesh satellite to see additional details.

The signal strength reading will tell you strong your signal is. (Note: Signal strength is not visible if the satellite is connected to the router via Ethernet cable.)

Pro Tip: You will see Excellent, Good or Weak. Move your mesh closer to your router to improve the signal.
